

Collection Framework

for-each

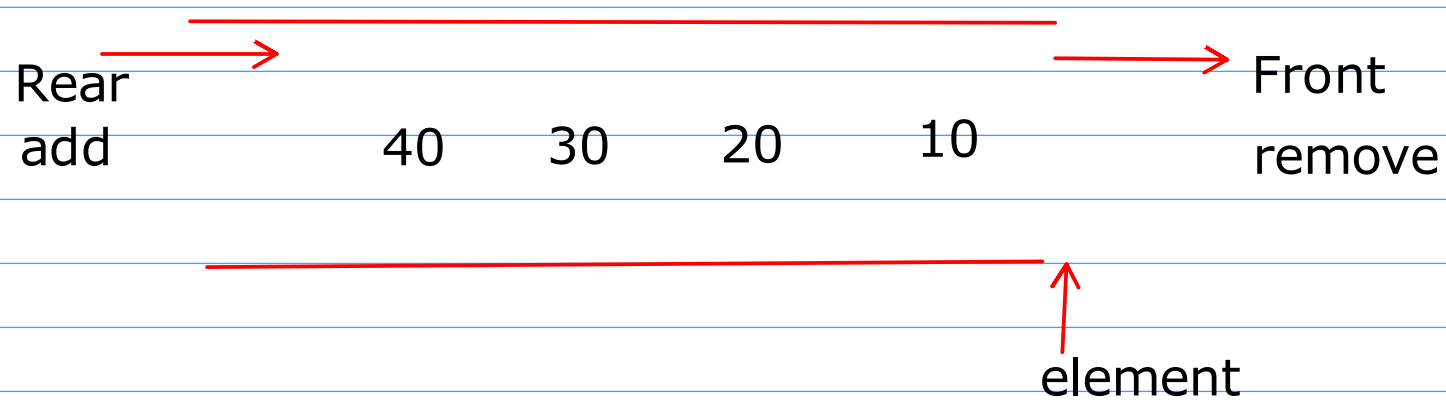

- Iterator
- Iterable -> Iterator iterator()
- Collection
- List

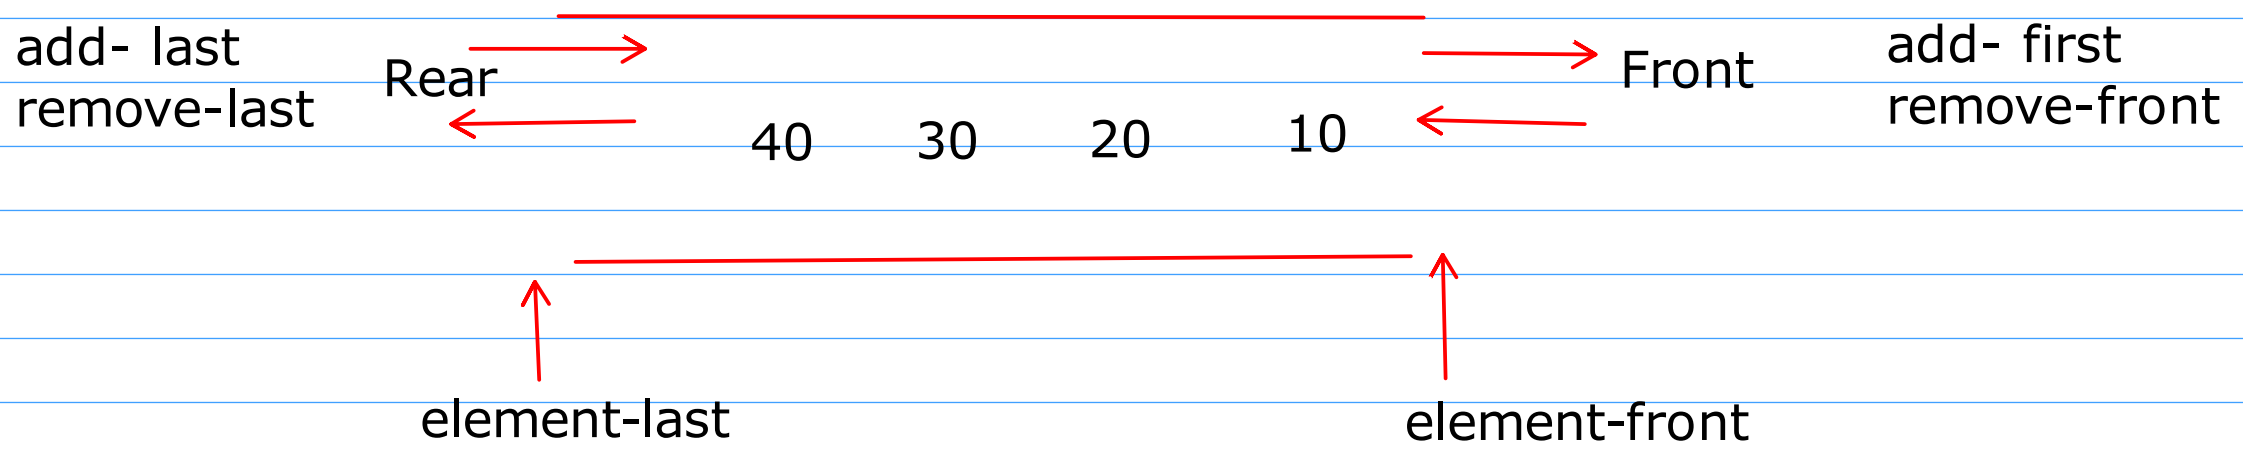

```
ListIterator<String> itr1 = l1.listIterator();  
while (itr1.hasNext()) {  
    System.out.println("Country - " + itr1.next());    // l1.get(0)  
}
```

contains(obj)
remove(obj)
indexOf(obj)
lastIndexOf(obj)

} equals() need to be overridden

Double ended queue

LinkedList

- dynamic growable array
- It provides the index based operation
- It behaves like a queue
- It behaves like a stack
- It behaves like a dequeu
